

Consultation Information

Your optometrist suspects you are experiencing symptoms of ocular surface disease and has recommended a Tear Clinic consultation.

Initial 40-minute consultation

We will monitor your ocular surface health using appropriate tests and questionnaires to help track your symptoms. During your consultation we will evaluate:

- the saltiness of your tears with a TearLab osmolarity test;
- the quality of your tear film;
- your blink pattern;
- your oil producing glands using LipiView II Dynamic Meibomian Imaging technology.

You will be provided with a tailor-made plan to manage your symptoms at home.

Prior to your Tear Clinic Consultation, we advise you to:

- Cease use of any drops or ointment for at least 24 hours. If your drops are required to control the pressure within your eye, please use at least 4 hours before your appointment.
- Remove contact lenses at least 4 hours prior to your appointment.
- Avoid use of oil-based facial cosmetics around the eye on the day of your appointment.
- Do not swim in a chlorinated pool for at least 12 hours prior to your appointment.
- Please bring a list of your current medication.
- Please bring in a list of products you have used to manage dry eye or the actual products if used at present.

Tests or drops used will not affect your ability to drive.

Price Plan
